# HELPFUL HINTS: IRRIGATION TIPS

- Water early morning and late afternoon – NEVER between 10 a.m. and 4 p.m.
- Water only on assigned days, where community laws apply
- Watering longer is better than watering often; allow 1 inch of water to accumulate no more than 2-3 times a week
- Use a rain gauge for accurate measurement and calibrate sprinklers accordingly
- Check sprinklers for broken or clogged heads monthly
- Ensure rain sensors are functional
- Clear grass and other debris from around sprinkler heads
